

PRIVATE TRANSPARENCY REPORT

2024

Söderberg & Partners Asset Management S.A.

Generated 25-11-2024

About this report

PRI reporting is the largest global reporting project on responsible investment. It was developed with investors, for investors. PRI signatories are required to report publicly on their responsible investment activities each year. In turn, they receive a number of outputs, including a public and private Transparency Report.

The private Transparency Reports, which are produced using signatories' reported information, support signatories to have internal discussions about their practices. Signatories can also choose to make these available to clients, beneficiaries, and other stakeholders.

This private Transparency Report is an export of your responses to the PRI Reporting Framework during the 2024 reporting period. It includes all responses (public and private) to core and plus indicators.

In response to signatory feedback, the PRI has not summarised your responses – the information in this document is presented exactly as it was reported.

For each of the indicators in this document, all options that you selected are presented, including links and qualitative responses. In some indicators, all applicable options are included for additional context.

Disclaimers

Legal Context

PRI recognises that the laws and regulations to which signatories are subject differ by jurisdiction. We do not seek or require any signatory to take an action that is not in compliance with applicable laws. All signatory responses should therefore be understood to be subject to and informed by the legal and regulatory context in which the signatory operates.

Responsible investment definitions

Within the PRI Reporting Framework Glossary, we provide definitions for key terms to guide reporting on responsible investment practices in the Reporting Framework. These definitions may differ from those used or proposed by other authorities and regulatory bodies due to evolving industry perspectives and changing legislative landscapes. Users of this report should be aware of these variations, as they may impact interpretations of the information provided.

Data accuracy

This document presents information reported directly by signatories in the 2024 reporting cycle. This information has not been audited by the PRI or any other party acting on its behalf. While this information is believed to be reliable, no representations or warranties are made as to the accuracy of the information presented.

The PRI has taken reasonable action to ensure that data submitted by signatories in the reporting tool is reflected in their official PRI reports accurately. However, it is possible that small data inaccuracies and/or gaps remain, and the PRI shall not be responsible or liable for such inaccuracies and gaps.

SENIOR LEADERSHIP STATEMENT

SLS 1	CORE	N/A	N/A	PUBLIC	Senior Leadership Statement	GENERAL

Section 1. Our commitment

- Why does your organisation engage in responsible investment?
- What is your organisation's overall approach to responsible investment, and what major responsible investment commitment(s) have you made?

The vision of Söderberg □ Partners group is to “work proactively today so that you can enjoy a richer and more secure life tomorrow”. This vision runs through our asset management, and it is a cornerstone in our sustainability work. The purpose of our sustainability work is to impact the world for the better and our view is that responsible investing is a requirement for long-term and sustainable value creation.

Responsible investments include integrating environmental, social, and corporate governance (ESG) factors into investment processes and decisions to better manage risks and opportunities. We conduct responsible investments based on three principal pillars: Exclusion screening, Positive selection, and Active engagement.

All management within Söderberg □ Partners Asset Management is encompassed by fundamental ESG criteria and governed by our “Policy for Shareholder Engagement” as well as our “Policy for Responsible Investments”.

Section 2. Annual overview

- Discuss your organisation's progress during the reporting year on the responsible investment issue you consider most relevant or material to your organisation or its assets.
- Reflect on your performance with respect to your organisation's responsible investment objectives and targets during the reporting year. Details might include, for example, outlining your single most important achievement or describing your general progress on topics such as the following (where applicable):
 - refinement of ESG analysis and incorporation
 - stewardship activities with investees and/or with policymakers
 - collaborative engagements
 - attainment of responsible investment certifications and/or awards

During the reporting year, we have implemented worked with principal adverse impact (PAI) data in as part of our ESG analysis as well as collected and analyzed the minimum proportion of sustainable investments for the funds in which we invest ("Target funds"), in anticipation of the reporting required under the Sustainable Finance Disclosure Regulation (SFDR). In cases where the minimum proportion was deemed too low, we have engaged with Target fund companies, with the goal of increasing their share of sustainable investments in the Target funds they manage. Furthermore, we have switched benchmark for our passively managed Exchange Traded Fund (ETF) holdings to the Paris Aligned benchmark, as well as parts of our Target funds, where possible, to even more sustainability-rigorous alternatives. Read more about this in our Climate Report 2022, found on our website.

In our strategy "Aktiv Påverkan" (English: Active Engagement), investors are invited on an annual basis to vote on a sustainability theme. The themes are based on the United Nations Sustainable Development Goals (SDGs), and determines which long-term sustainability goal is the most relevant to the investors and what the strategy should focus on going forward. We implement this by investing and subsequently engaging with listed equities that are deemed to improve within the specific theme, with the goal of driving positive change. During the reporting year we collaborated with two companies on the theme of responsible consumption and production (circular economy), with the help of our collaborative partner Research Institutes of Sweden (RISE). We also continued working together with Ecogain to engage with a company on the current theme of biodiversity. As a complement to the direct investments in listed equities we also invest in thematic equity funds that correspond to the specific sustainability themes which complements the theme on a general basis.

Section 3. Next steps

- What specific steps has your organisation outlined to advance your commitment to responsible investment in the next two years?

Specific steps include increasing the overall share of sustainable investments by way of investing in Target funds with a larger share of sustainable investments or by way of engaging with these, continuing our thematic investments in listed equities, as well as researching the possibility of committing to net zero goals.

For our cash holdings, we have a process in place that annually evaluates the adherence of our depository and clearing broker to international standards and conventions. This evaluation is conducted through a norm-based screening, which is based on the principles of the UN Global Compact and the OECD guidelines for multinational corporations. To further ensure their compliance, we utilise a qualitative ESG questionnaire which allows us to consistently monitor and ensure alignment with globally recognised ethical and sustainability standards.

Within our standard planning horizon, which is up to 10 years, we have identified several climate-related risks and opportunities that may affect our investments. These risks are described on a more detailed level in our Climate Report, informed by Task Force on Climate-related Financial Disclosures (“TCFD”), but some of the risks identified include increased physical risks such as extreme weather events, water scarcity, and rising sea levels, as well as transitional risks such as changes in policy, technology, and market trends. In terms of identified opportunities, we have recognized investments in renewable energy, energy efficiency, and sustainable agriculture as potential areas for growth, where we are indirectly invested in several of them. We aim to inform our shareholders about the potential impact of climate-related risks and opportunities in our investments, and how we are managing these risks and seizing opportunities to create long-term value, by publishing a Climate Report annually which includes reallocation of assets where we deem the physical and/or transition risks are higher.

Does your organisation integrate climate-related risks and opportunities affecting your investments in its overall investment strategy, financial planning and (if relevant) products?

● (A) Yes, our overall investment strategy, financial planning and (if relevant) products integrate climate-related risks and opportunities

Describe how climate-related risks and opportunities have affected or are expected to affect your investment strategy, financial planning and (if relevant) products:

As a result of considering climate-related risks (and opportunities) for our investments, we have reallocated our passively managed Exchange Traded Funds (“ETFs”) into such alternatives with more focus on climate change. This was implemented by investing in ETFs that replicate a Paris-Aligned Benchmark (“PAB”), which is a benchmark consisting only of companies with characteristics that imply less climate impact, without compensating for any other ESG factors. In addition to the indices’ exclusion criteria regarding controversial business activities and ESG controversies, they apply a requirement that the companies included in the respective index must exhibit a self-decarbonization rate of their greenhouse gas emissions that is aligned with the Paris Agreement on climate change. The EU minimum standard for the PAB constituents is a decarbonization rate of 7% on average, but the ETFs which we are invested in replicate indices that go beyond these minimum requirements, and the companies in these indices (MSCI ESG Climate Paris Aligned) have an annual self-decarbonization rate of 10%. The purpose of the reallocation was to further increase our exposure to companies at the forefront of the transition to a <2°C scenario, increase the capacity to adapt to climate change, and reduce exposure to transition and physical climate risks.

- (B) Yes, using the One Earth Climate Model scenario
- (C) Yes, using the International Energy Agency (IEA) Net Zero scenario
- (D) Yes, using other scenarios**

Specify:

As stated in our Climate Report, we use the PACTA Transition Monitor on an annual basis for an assessment of our three investments strategies - equities and bonds separately. The PACTA tool assesses the alignment of an investment portfolio with a <2°C scenario by analyzing the emissions trajectory of each holding (company) in the portfolio and combining it with sectoral and regional trends. This helps investors to identify the sectors and companies that are most at risk due to the transition to a low-carbon economy and adjust their investments accordingly. The tool uses various data sources, including company-reported emissions and sector-specific models, to provide a comprehensive analysis of a portfolio’s climate risks and opportunities. It also offers different metrics and visualizations, such as a “transition score” that ranks each company based on its alignment with a 2°C scenario.

Does your organisation have a process to identify, assess, and manage the climate-related risks (potentially) affecting your investments?

(A) Yes, we have a process to identify and assess climate-related risks

(1) Describe your process

We recognize the significance of climate change and its potential implications on financial performance. As signatories of the Task Force on Climate-related Financial Disclosures (“TCFD”), we adhere to the TCFD framework and guidelines to identify and assess climate-related risks. As described earlier in PGS 43, we use the PACTA tool for scenario analysis, which enables us to evaluate our portfolio companies’ alignment with the Paris Agreement and assess their potential exposure to transition and physical climate risks. This analysis allows us to gain insights into the potential financial impacts associated with climate change and is included in our investment decisions. In addition, we gather emissions data of each of the underlying funds in which we invest (“Target funds”), which is then aggregated across all our portfolios.

This provides us with a view of carbon emissions across our portfolios and allows us to assess and monitor the climate impact of our investments over time. Our general ESG process involves ongoing monitoring and our annual meetings with the Target funds include an ESG questionnaire, with questions concerning how the Target fund manager actively works to reduce the total emissions in the portfolio. Furthermore, greenhouse gas (“GHG”) emissions, carbon footprint, exposure to companies active in the fossil fuel sector, share of non-renewable energy consumption and production, are all considered principal adverse impacts in our funds. All of these are directly related to climate-related risks and climate change, and the indicators are measured and monitored for all Target funds on a regular basis. If a Target fund shows deterioration of any of the indicators between two measurements, a dialogue with the external Target fund manager will be initiated.

(2) Describe how this process is integrated into your overall risk management
